

Project Design Phase Solution Architecture

Date	07 July 2026
Team ID	
Project Name	Qcab – Online Cab Booking Application
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Example - Solution Architecture Diagram:

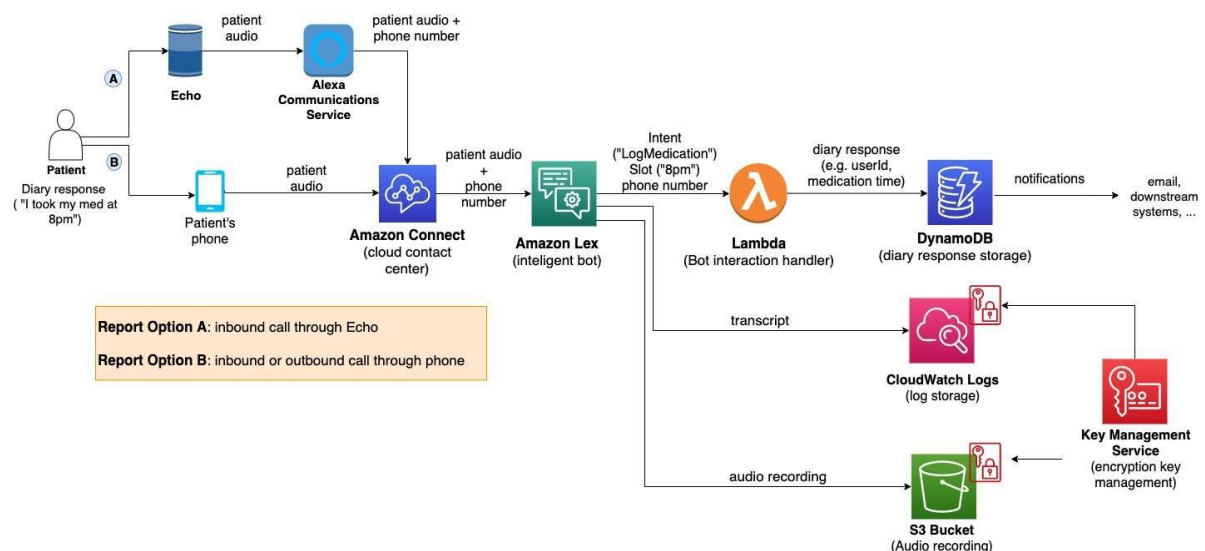

Figure 1: Architecture and data flow of the voice patient diary sample application

Q cab – Proposed Solution Architecture Diagram:

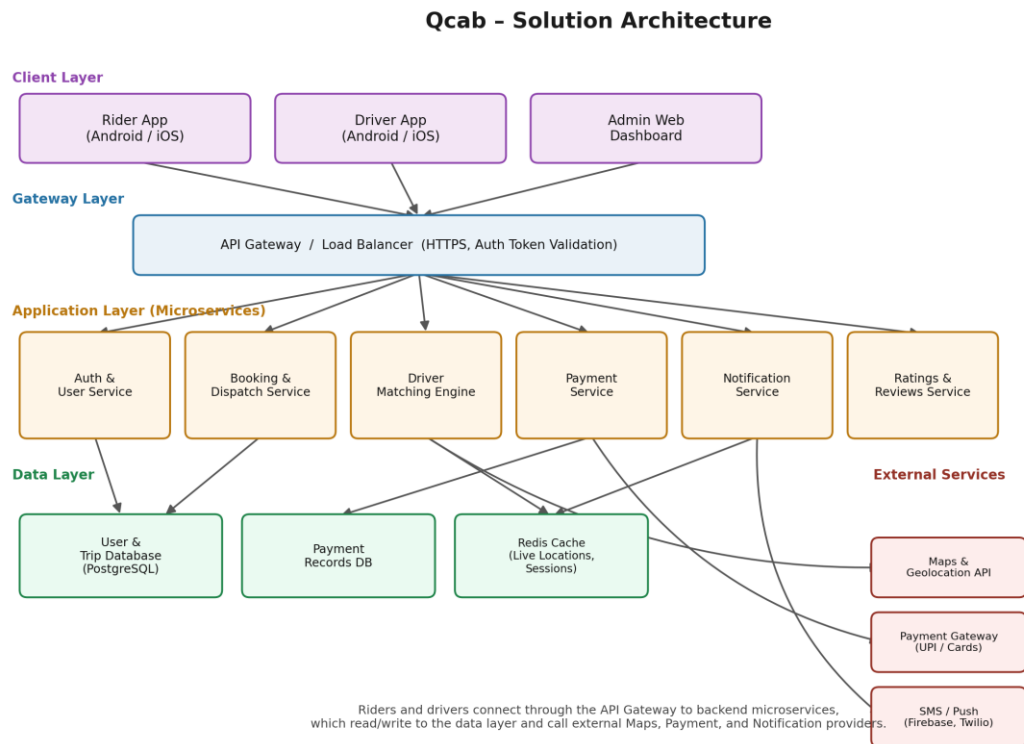

Figure 2: Qcab solution architecture – rider and driver apps connect via the API Gateway to backend microservices (Auth, Booking & Dispatch, Driver Matching, Payment, Notification, Ratings), which use the data layer and integrate with Maps, Payment Gateway, and SMS/Push notification providers.
